

## EXP 7 Servlet-based project is to store user preferences

### AIM:

The goal of this Servlet-based project is to store user preferences (such as theme and language) using cookies and retrieve and display them on subsequent visits.

### ALGORITHM:

Step 1: Load Preferences Page → **Browser checks for existing cookies.**

Step 2 Retrieve Preferences (GET Request) → **Servlet reads cookies and applies saved settings.**

Step 3: User Selects Preferences → **User picks theme and language.**

Step 4: Save Preferences (POST Request) → **JavaScript sends data to Servlet.**

Step 5: Servlet Stores Preferences → **Cookies are updated and sent back to the browser.**

Step 6: Preferences Applied on Next Visit → **Browser loads saved settings automatically.**

### PROGRAM:

#### index.html (Frontend - Combined HTML, CSS & JavaScript)

```
html CopyEdit

## PreferenceServlet.java (Backend - Java Servlet)

```
java CopyEdit
import java.io.IOException; import
javax.servlet.ServletException; import
javax.servlet.annotation.WebServlet; import
javax.servlet.http.Cookie; import
javax.servlet.http.HttpServlet; import
javax.servlet.http.HttpServletRequest; import
javax.servlet.http.HttpServletResponse; import
org.json.JSONObject;

@WebServlet("/PreferenceServlet")
public class PreferenceServlet extends HttpServlet {
    protected void doPost(HttpServletRequest request, HttpServletResponse
response) throws ServletException, IOException {
    String theme = request.getParameter("theme");
        String language = request.getParameter("language");
        Cookie themeCookie = new Cookie("theme", theme);
        Cookie languageCookie = new Cookie("language", language);

        themeCookie.setMaxAge(60 * 60 * 24 * 7); // 1 Week
    languageCookie.setMaxAge(60 * 60 * 24 * 7);

        response.addCookie(themeCookie);
    response.addCookie(languageCookie);    }
    protected void doGet(HttpServletRequest request, HttpServletResponse
response) throws ServletException, IOException {
        String theme = "light";
        String language = "English";

        Cookie[] cookies = request.getCookies();
    if (cookies != null) {
        for (Cookie cookie : cookies) {
            if ("theme".equals(cookie.getName())) theme =
cookie.getValue();
            if ("language".equals(cookie.getName())) language =
cookie.getValue();
        }
    }

        JSONObject json = new JSONObject();
    json.put("theme", theme);
    json.put("language", language);
    response.setContentType("application/json")
    ;
    response.getWriter().write(json.toString())
    ;
        }
    protected void doDelete(HttpServletRequest request, HttpServletResponse
response) throws ServletException, IOException {
    Cookie themeCookie = new Cookie("theme", "");
        Cookie languageCookie = new Cookie("language", "");
        themeCookie.setMaxAge(0);
    languageCookie.setMaxAge(0);
        response.addCookie(themeCookie);
    response.addCookie(languageCookie);
        } }
}
```

**OUTPUT:**

A form titled "Set Your Preferences" with a light orange background. The form is white with rounded corners and a subtle shadow. It contains two dropdown menus: "Choose Theme:" with "Light" selected and "Choose Language:" with "English" selected. Below the dropdowns is a red button labeled "Save Preferences".

**Set Your Preferences**

Choose Theme:

Light ▼

Choose Language:

English ▼

Save Preferences

A confirmation card titled "Your Preferences" with a light orange background. The card is white with rounded corners and a subtle shadow. It displays the selected preferences: "Theme: light" and "Language: English". At the bottom is a red button labeled "Change Preferences".

**Your Preferences**

**Theme: light**

**Language: English**

Change Preferences

**RESULT:** The Servlet-based project to store user preferences using cookies were executed successfully.
